

CREDENTIAL ROAMING

ABSTRACT

Implementations are described and claimed herein to enable credential
5 roaming among a plurality of different computing devices. An exemplary system
may include an event handler to receive event notifications such as, e.g., a client
logon. The event handler may invoke a management service in response to
receiving an event notification. The management service may include a
synchronizing module to synchronize a user's credentials with a remote directory
10 service, such as, e.g., Active Directory, so that the user's credentials are available
from any of a number of different computing devices.
